Design Choices & Reasoning

Relax on

Healthy Minding App

Get the best out of rest

Module: Human Computer Interaction / UI-UX Design

Module Code: SE206.3

Lecturer: Ms. Dulanjali Wijesekara

Submission date: 2025.12.20

NSBM Green University

Relax on

“A healthy mind is
a Treasure”

Tool used

Introduction & Project overview

This application was designed to provide an inclusive and accessible digital experience for a diverse group of users. Many existing applications do not fully support users with disabilities, making everyday tasks difficult. Our app focuses on improving usability, accessibility, and ease of navigation so that users with different abilities can interact with the system independently and comfortably.

Objective of Inclusive Design

Main Objectives of Our Design

Provide equal access and usability for all users

Design for users with visual, motor, and cognitive impairments

Improve ease of use for elderly and first-time users

Reduce cognitive load through simple layouts

Follow inclusive design and accessibility principles

Goal :

To create an intuitive, accessible, and user-friendly interface that benefits all users without discrimination.

Research Findings – User Accessibility Challenges

Vision Impairment

- Small text
- Low contrast

Motor Limitations

- Small buttons
- Difficult gestures

Cognitive Challenges

- Complex Layout
- Too many options

Elderly Users

- Poor readability
- Unclear icons

The research findings helped us understand user difficulties and accessibility needs, enabling us to design a more inclusive interface.

User Research

Our user research combined secondary research and a user survey to understand mental health, mindfulness, and meditation practices. The findings helped us identify common user challenges, accessibility issues, and expectations across different age groups. These insights guided our inclusive design decisions and ensured the interface supports diverse user needs, including users with accessibility requirements.

Have you use any mental health app before ?
10 responses

Do mental health apps help you with the service you are looking for?
10 responses

Persona 1: Ravi Perera - Busy Working Professional With Anxiety

User Scenario:

During a short work break, Ravi opens the meditation app and starts a **5-minute anxiety-relief session**. The simple interface and calming guidance help him relax quickly and return to work feeling calmer and more focused.

Mr. Ravi Perera

Bio

Ravi is a 27-year-old software engineer with anxiety disorder, seeks simple, distraction-free apps to manage stress and stay focused during hectic workdays. He relies on his smartphone for quick mental well-being tools that help him stay calm and in control.

Goals

- Manage anxiety during work breaks
- Do 5–10 minute meditation sessions
- Fit stress relief into a busy schedule
- Keep consistent mental wellness habits

Frustrations

- Limited time for long meditation sessions
- Overwhelming app content
- Hard-to-use interfaces
- Tools that aren't concise or helpful

Personality

Ravi is analytical, detail-oriented, and introverted, preferring calm environments. He is self-aware, proactive about his mental health, and values simple, intuitive solutions. Under stress, he may feel anxious but stays committed to maintaining balance.

Motivations

Ravi is motivated by the need to maintain calm and focus despite a busy work schedule. He seeks simple, quick solutions that relieve stress without taking much time. The idea of achieving mental clarity in minutes energizes him, and he is driven by the hope that small, consistent habits can improve his well-being, reduce anxiety, and enhance both his productivity and overall quality of life.

-  **Age :** 27
-  **Occupation :** Software Engineer
-  **Location :** Colombo
-  **Education:** Bachelor's Degree In Software Engineering
-  **Disability Consideration:** High stress and mild anxiety (Mental Health Condition)
-  **Quote :** "A few moments of calm are all I need to reset my mind."

Persona 2: Suneetha Fernando - Elderly User With Hearing Impairment

Mrs.Suneetha Fernando

Bio

Sunetha Fernando, 60, is a retired teacher with partial hearing loss. She enjoys staying mentally active and uses a tablet to follow meditation and relaxation routines with clear visuals and text instructions, helping her sleep better, reduce stress, and maintain her well-being.

Goals

- Improve sleep and relaxation
- Follow meditation routines easily
- Reduce stress with accessible exercises
- Maintain a consistent wellness routine

Frustrations

- Audio-only instructions are hard to follow
- Small buttons and unclear icons
- Complex navigation in apps
- Difficulty seeing or interpreting visuals

Personality

Sunetha is patient, disciplined, and thoughtful, reflecting her years as an educator. She values clarity and structure, preferring tools that are straightforward and accessible. While she is gentle and reflective, she can feel frustrated when technology is not intuitive. She appreciates solutions that respect her pace and accessibility needs.

Motivations

Sunetha is motivated by the desire to maintain her mental and physical well-being as she ages. She enjoys structured routines that are easy to follow and help her feel calm and rested. Clear, visually guided exercises give her confidence and independence, allowing her to benefit from meditation and relaxation practices without frustration or confusion.

- Age :** 60
- Occupation :** Retired Teacher
- Location :** Kadawatha
- Education :** Bachelor's Degree In Arts
- Disability Consideration :** Partial hearing loss
- Quote :** "I want to relax my mind, but I need something I can read clearly."

User Scenario:

Suneetha opens the meditation app in the evening to relax before sleep. She selects a meditation session with **text instructions and visual guidance** instead of audio-only content. The clear visuals and large text help her follow the session comfortably, allowing her to feel calm and relaxed before going to bed.

Persona 3: Kavya Jayasekara - User With Motor Impairment

User Scenario:

Kavya opens the meditation app using **voice control** and starts a guided session. The large buttons and simple navigation allow her to control the app with minimal physical effort, helping her relax and practice mindfulness independently.

MS.Kavya Jayasekara

Bio

Kavya Jayasekara is a 30-year-old graphic designer with limited hand mobility. She uses a smartphone with voice control and prefers simple, accessible apps that support mindfulness, reduce stress, and help her stay focused.

Goals

- Practice mindfulness independently
- Use the app with minimal physical effort
- Access meditation sessions easily
- Maintain consistent relaxation habits

Frustrations

- Small touch targets are hard to use
- Complex gestures are difficult
- Navigating apps requires too much hand movement
- Lack of voice control options.

Personality

Kavya is creative, patient, and resilient. As a designer, Kavya appreciates clean layouts and thoughtful user experiences. While physical limitations can be frustrating, Kavya remains optimistic and solution-oriented, valuing tools that promote independence, simplicity, and dignity.

Motivations

Kavya is motivated by the desire to remain independent and in control of daily activities. Accessible technology empowers Kavya to practice mindfulness without relying on others. Simple voice-driven interactions and effortless navigation encourage consistent use and help reduce stress, supporting both creativity and emotional balance.

Mr. Kavindu Edirisinghe

Bio

Kavindu is a undergraduate student with low vision, which makes reading small text and navigating complex interfaces challenging. He prefers accessible mobile applications with audio guidance and screen reader support, enabling him to manage his studies and mental well-being independently.

Goals

- Reduce academic stress and anxiety
- Practice meditation independently
- Improve focus and concentration during studies
- Use relax on app without visual barriers

Frustrations

- Small font sizes and poor color contrast
- Apps that are not compatible with screen readers
- Complex navigation and too many visual elements
- Lack of audio-based guidance

Personality

Kavindu is calm, determined, and self-motivated. He values simplicity and clarity in both his academic and personal life. While he is generally quiet and reserved, he is proactive when it comes to using technology that supports accessibility. He prefers structured routines and applications that provide clear audio instructions and predictable navigation.

Motivations

Kavindu is motivated by his desire to remain independent and confident in managing both his studies and mental well-being. He wants to use meditation as a daily habit to stay calm, especially during exams and assignment deadlines. Having an accessible meditation app helps him feel included and empowered, as he can relax and practice mindfulness without depending on others for assistance.

 **Age :** 25

 **Occupation :** Undergratuate
University Student

 **Location :** Matara

 **Education :** Bachelor's Degree
In Computer Science

 **Disability Consideration:** Partial
visual impairment (low vision)

 **Quote :** "I want to manage
my stress and practice
meditation without struggling
to see or navigate the app."

Persona 4: Kavindu Edirisinghe - Visually Impaired University Student

User Scenario:

Kavindu opens the meditation app using a **screen reader** and selects a guided meditation session through audio navigation. The app's high-contrast interface and voice guidance allow him to complete the session independently, helping him reduce stress after a long day of studies.

High-Fidelity Prototype

This high-fidelity prototype was developed using Figma to demonstrate the final inclusive interface design. It presents the main navigation flow and key screens, including the Home, Profile, and Settings pages. The prototype showcases how accessibility features such as clear layouts, readable text, and easy navigation work together in real user scenarios.

Impact & Benefits

The redesigned interface provides a better user experience through a clean, modern layout and simplified navigation. By applying inclusive design principles, the app becomes accessible to users of all abilities, reducing user errors and confusion. These improvements ensure that the interface is easy to use, visually clear, and supportive for a diverse range of users, demonstrating that inclusive design enhances usability for everyone.

Conclusion

This project allowed us to apply inclusive design principles by understanding diverse user needs, including users with accessibility challenges. Through user research, persona development, and prototype design, we created an interface that improves usability, accessibility, and overall user experience. Additionally, working as a team strengthened our collaboration, communication, and problem-solving skills. This project helped us recognize the importance of designing digital solutions that are inclusive, user-centered, and accessible to everyone.

THANK
YOU...!
